¿WHAT IS SMART GLOBAL TOKEN?

\$SGB is a Token created on the **TRON Blockchain** (TRX) under the TRC-20 protocol with an ecosystem focused on the usability of cryptocurrency financial markets, videogames, NFTs, online casinos with the vision of being an Exchange at everyone can reach. The benefits from our ICO will seen from the first day of our pre-sale giving incentives to each of our investors.

STAKE & FARMING

We have researched the market for **6 months** to find out what kind of products are profitable and viable within our ecosystem and we conclude that crypto cannot be used for a single product or service since its growth is based on the usability, so we decided to choose the most reliable, scalable products and services in the market so that the benefits of our investors are not only seen buying our Token.

ECOSYSTEM

SMARTSWAP

It is a DEX (Decentralized Exchange) in which you can make swaps between tokens on the TRON chain without the need for registration. These swaps are achieved thanks to third parties depositing their assets in pools in order to provide liquidity to traders who seek to make these exchanges, receiving a return through the fees generated by the protocol. The most interesting thing about Smart Swap is that it does not use a buy-sell order book as centralized exchanges use, but an AMM (Automated Market Making) system that allows the pool to always remain balanced and set prices to assets in a decentralized way . . In short, Smart Swap is a protocol with liquidity pools with which you can exchange tokens in a decentralized, fast and very efficient way, both for the price received for the assets and for the efficiency in terms of gas fees.

CRYPTOCURRENCIES

PROFITS

- SMART SWAP will absorb 50% of energy per transaction, significantly reducing the issue that always ends up displeasing customers and that is the increase in commissions.

- You can participate as a liquidity provider in Smart Swap and generate rewards in its different investment modalities.

- Liquidity Pool:

Pool of Liquidity where you must contribute a pair of currencies in the same monetary equivalence.

Example: \$10,000,000 in SGB and \$10,000,000 in TRX = SGB/TRX

For contributing Liquidity you will receive a voucher in the form of a token. The reward is received in the native token of the swap.

STAKE

● The staking process consists of acquiring cryptocurrencies and keeping them locked in a wallet in order to receive profits or rewards. It is a process very similar to HODL, only that in stake the balances are locked and you cannot use them freely. At the same time, it contributes to the operation and functioning of the blockchain of that same cryptocurrency.

Generate returns of 0.02% daily for locking your tokens

Stake	\$SGB	Estimated Value	Exchange	Month
2.000.000	12.000	0.005\$	60\$	February
2.000.000	12.000	0.006\$	72\$	March
2.000.000	12.000	0.007\$	84\$	April
2.000.000	12.000	0.008\$	96\$	May
2.000.000	12.000	0.01\$	120\$	June
2.000.000	12.000	0.02\$	240\$	July
2.000.000	12.000	0.03\$	360\$	August
2.000.000	12.000	0.04\$	480\$	September
2.000.000	12.000	0.05\$	600\$	October

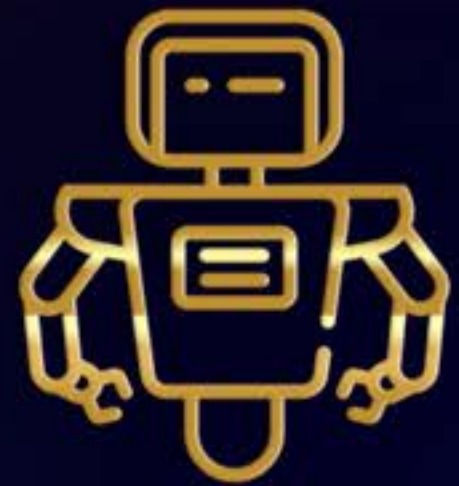

FARMING

- Yield farming, also called liquidity mining, is a way to generate rewards with cryptocurrency holdings. Simply put, it means locking up cryptocurrencies and earning rewards. In a way, yield farming can be equated to staking. However, there is a lot of complexity operating in the background. In many cases, it works through users called liquidity providers (LPs) who add funds to liquidity pools.

- Example: Once you create a pair in the liquidity pool, a token type SGB/USDT pair will be issued, which will be a ticket that indicates that you own that injected liquidity, that same SGB/USDT-LP pair can be added to the farming function and get rewards.

SMARTBOT

The market for all the bots in cryptocurrency trading ends up not being so smart since this market is guided more by an emotional sense than a technical one and the trading bots do not follow the market pattern, since they would have to analyze new ones, FOMOS in social networks, events of each crypto in its official network, etc.

Our intelligent smartbot is not made 100% with artificial intelligence, it is guided by indications of traders who rely more on the experience obtained through trial and error for optimal operation, based on this our motto is "Expect the best and prepare for the war". From the instructions of the program, our Bot will be the mirror of the movements learned from expert traders.

TRADING STRATEGY

- 1 Buy Limit: Entry
Sell Limit: 10% - 20%
Stop Loss: -5%
- 2 Buy Limit: -12%
Buy Limit: Entry
Trailing stop: 50% below the current profit.
Example: If the profit is 10%, we insure with 5% profit.
- 3 Buy Market: We take market entries that are moving a higher purchase volumen.
Sell Limit: We automatically sell at 15% of profit
Stop Loss: -5%

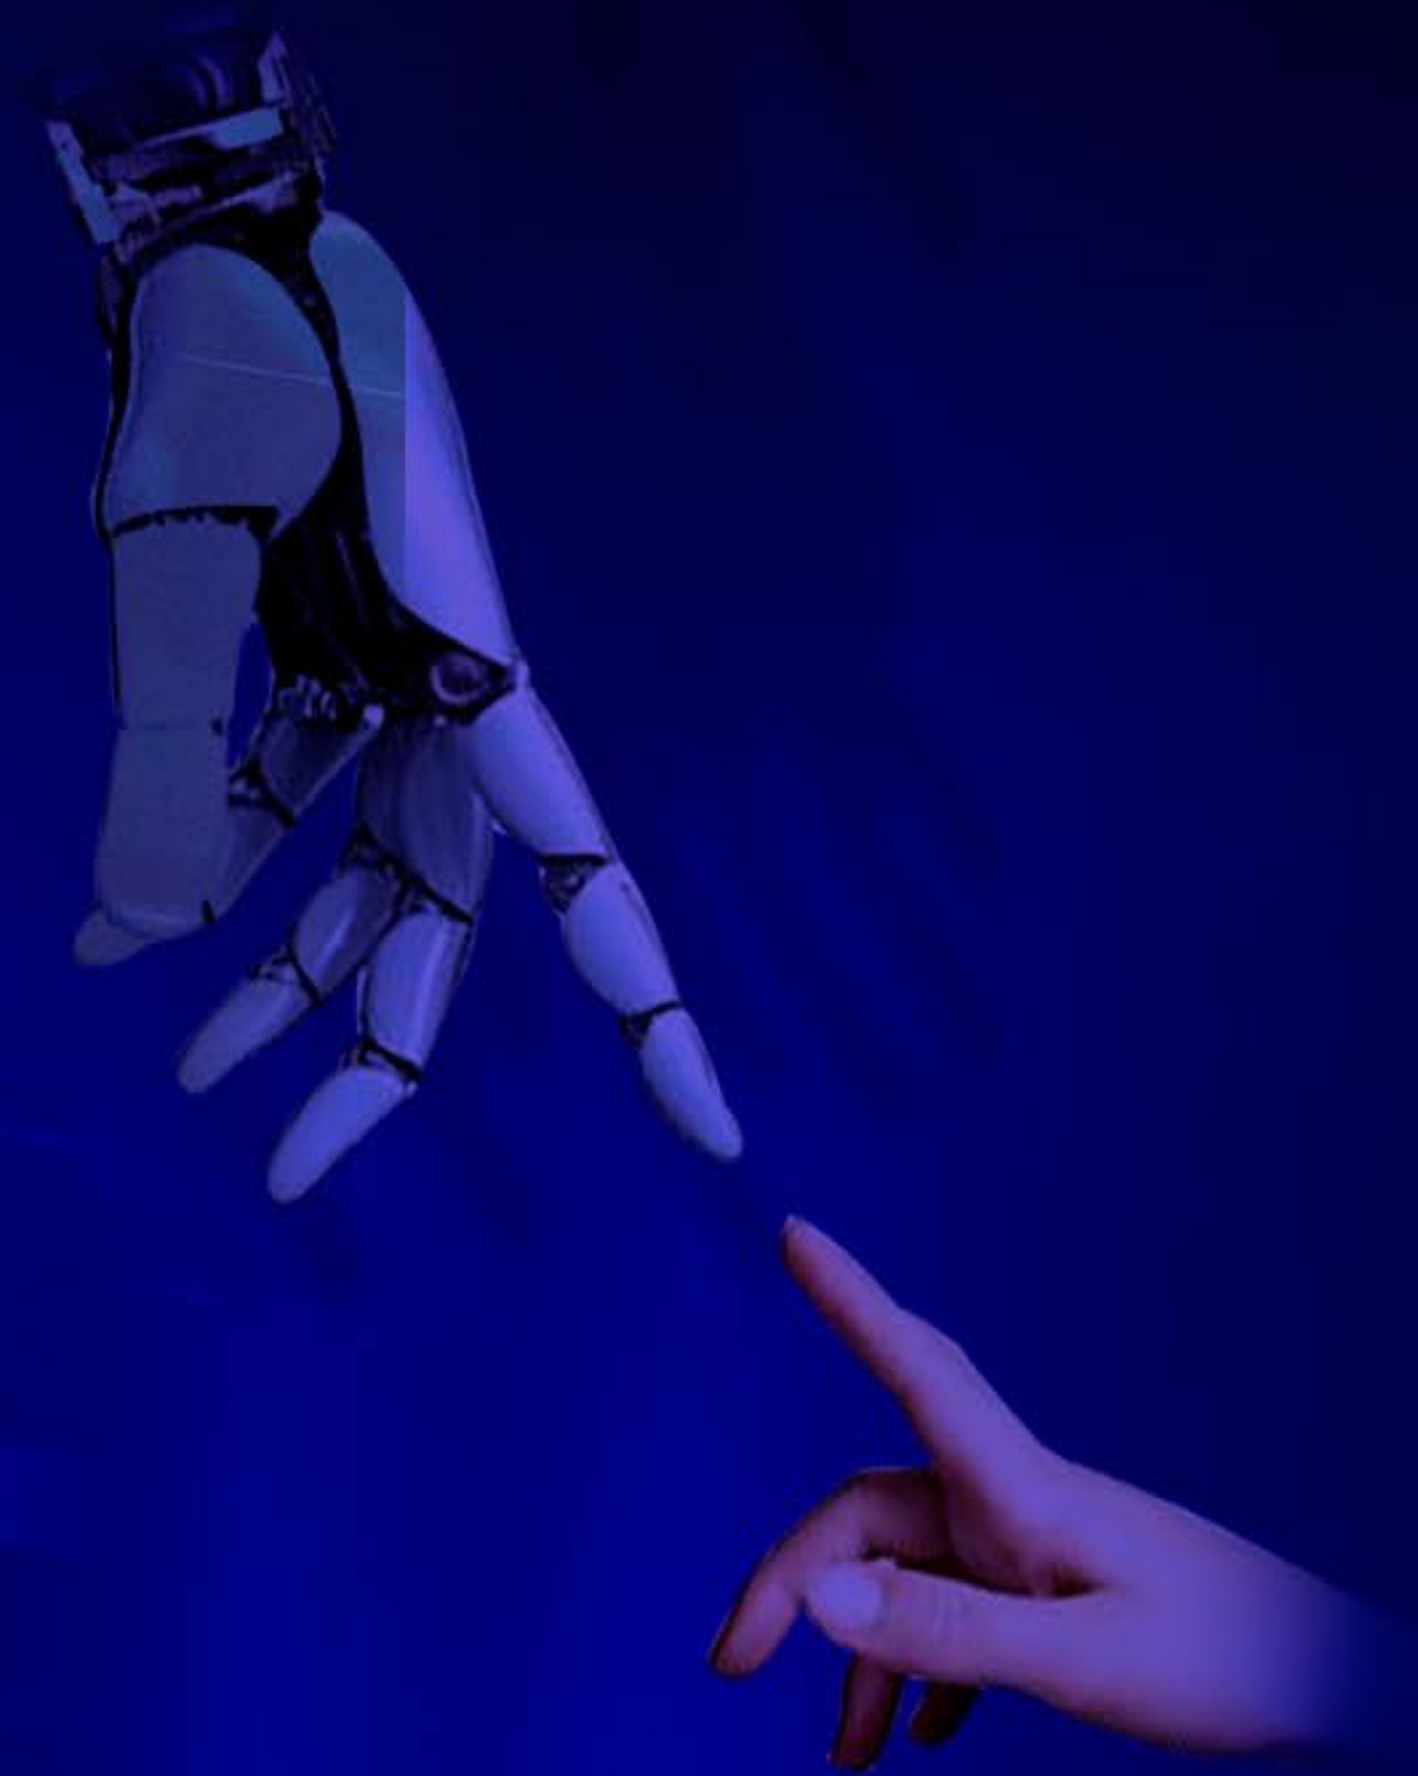

Integration:

Artificial Intelligence

↳ Strategy Change

↳ APIS

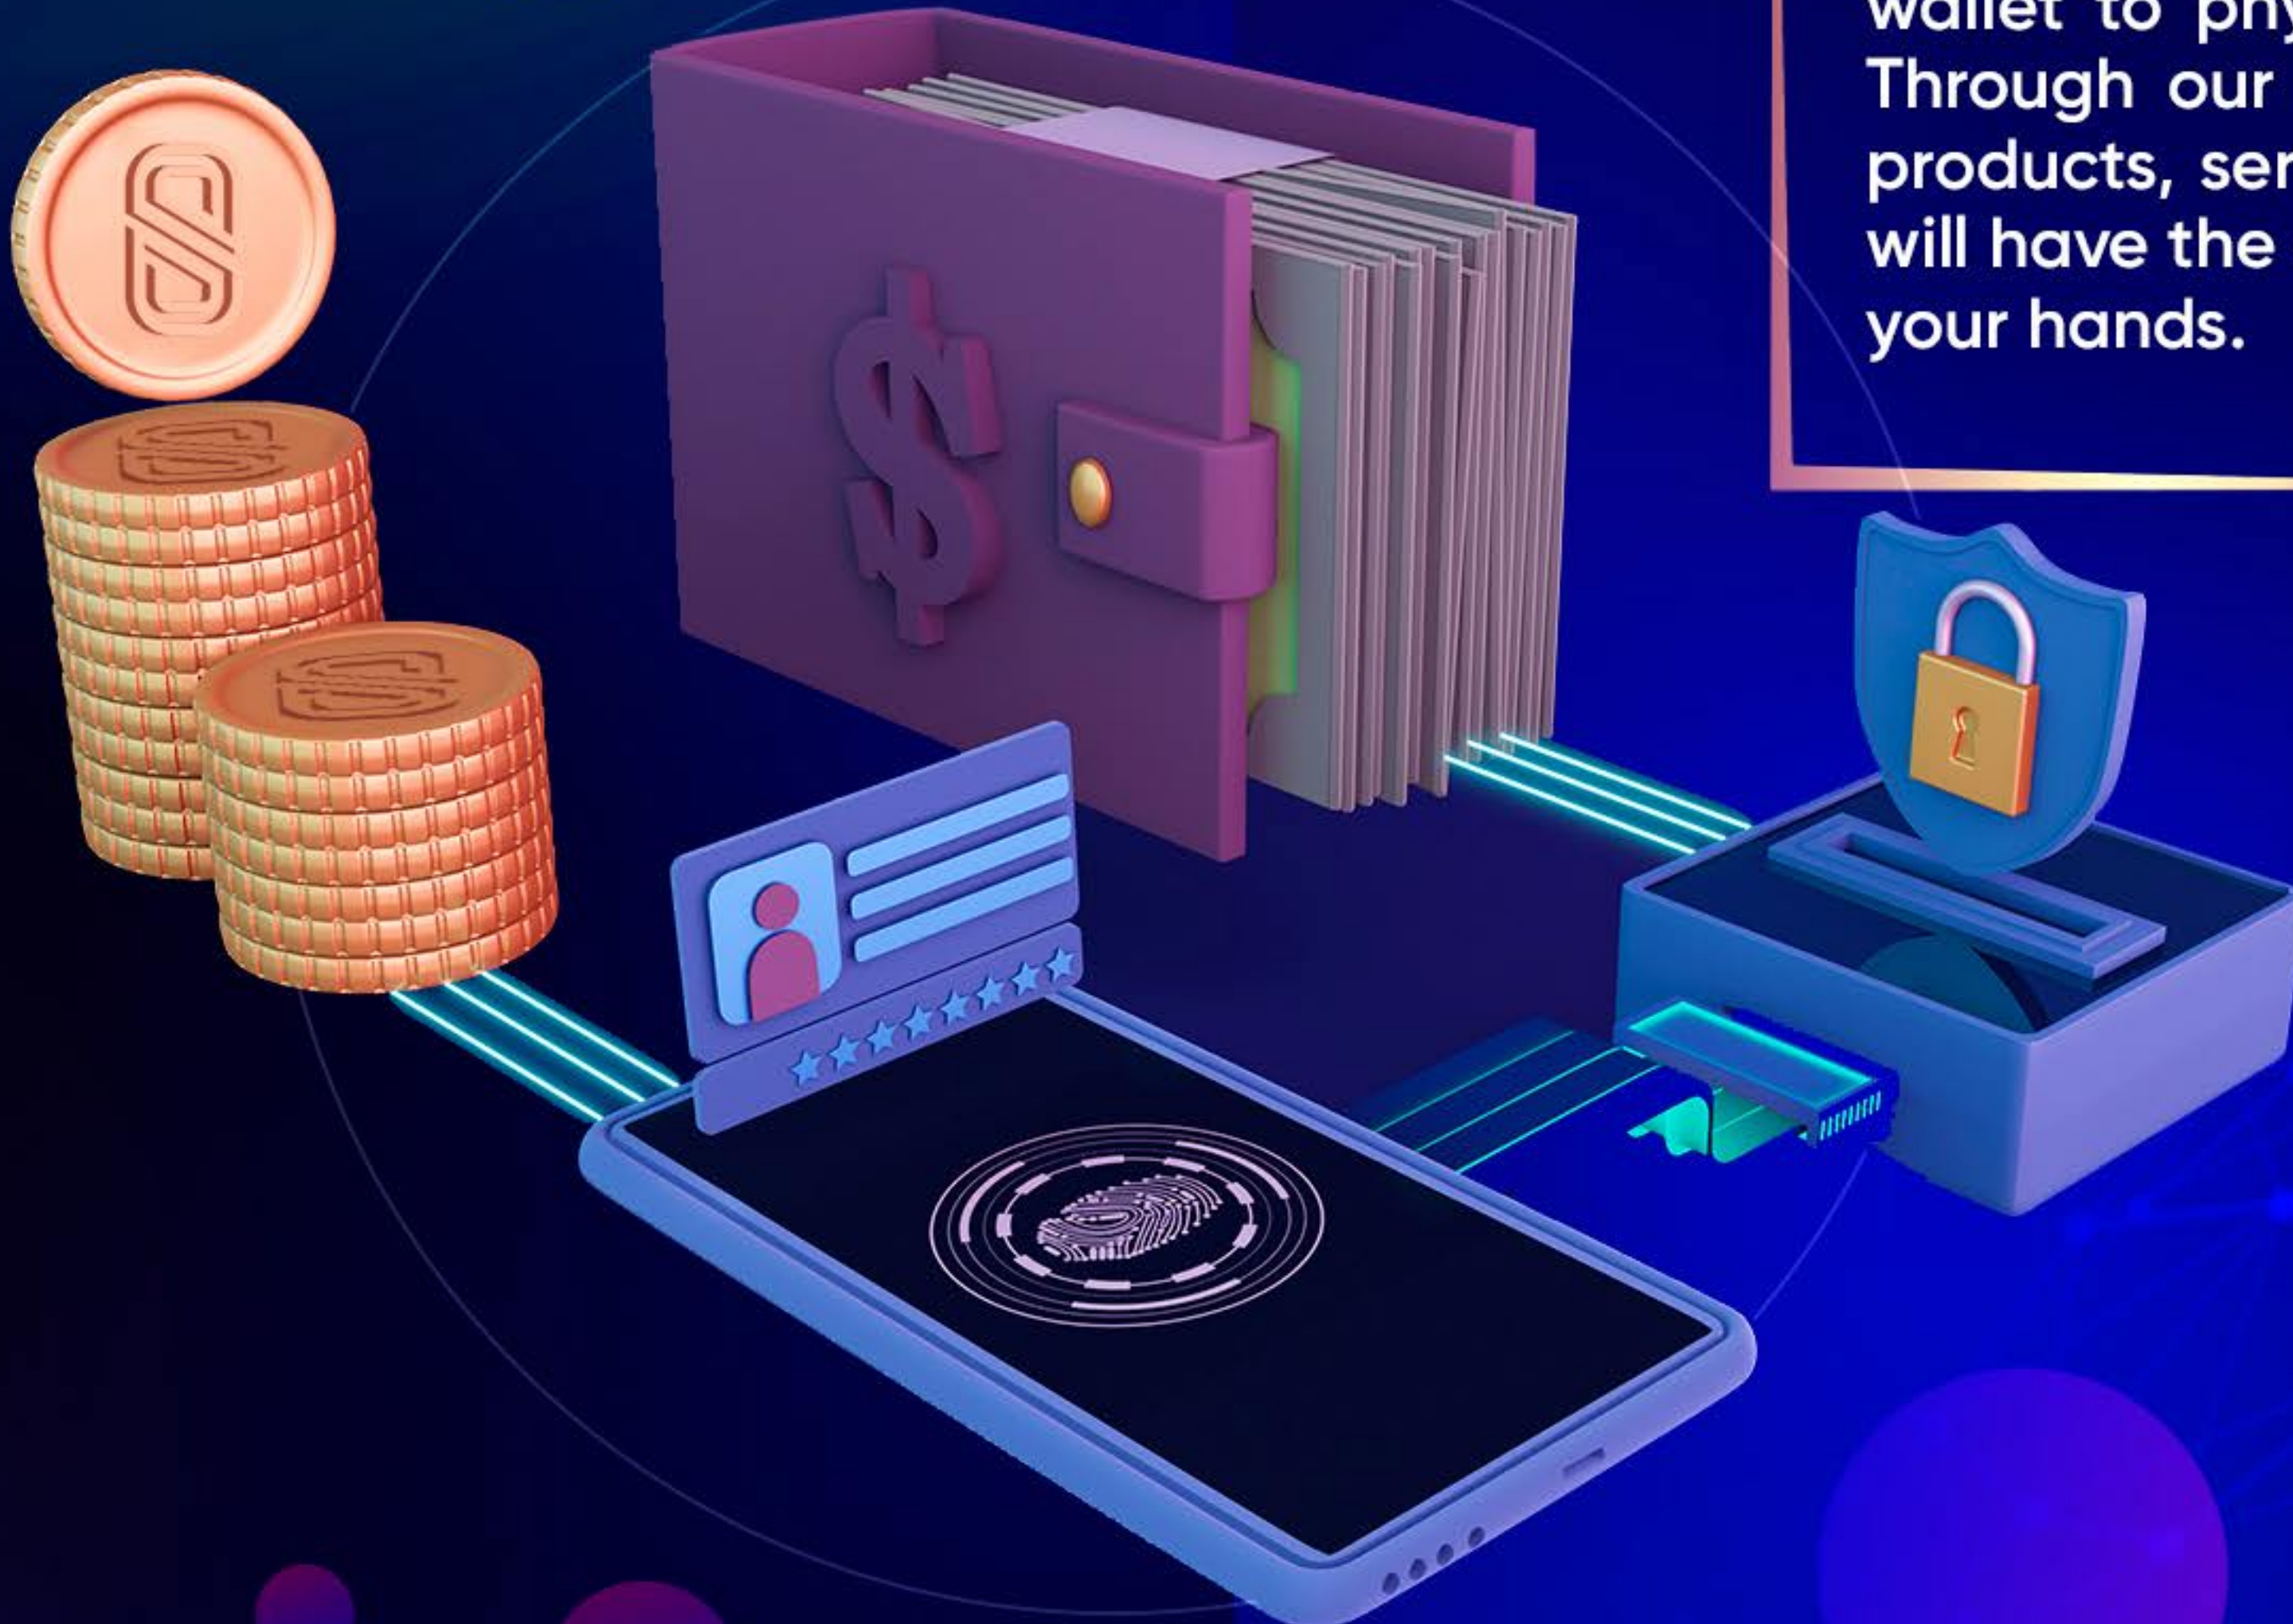

↳ Capital injection

SMARTWALLET

With our **SmartWallet** we will release the sale of **SGB** for our entire community in turn we will take our wallet to physical establishments for greater use; Through our application you can also access our products, services and associated companies, you will have the ease of having our entire ecosystem in your hands.

GLOBALART

You've heard of NFT, but you might still wonder:

Where are NFTs bought?

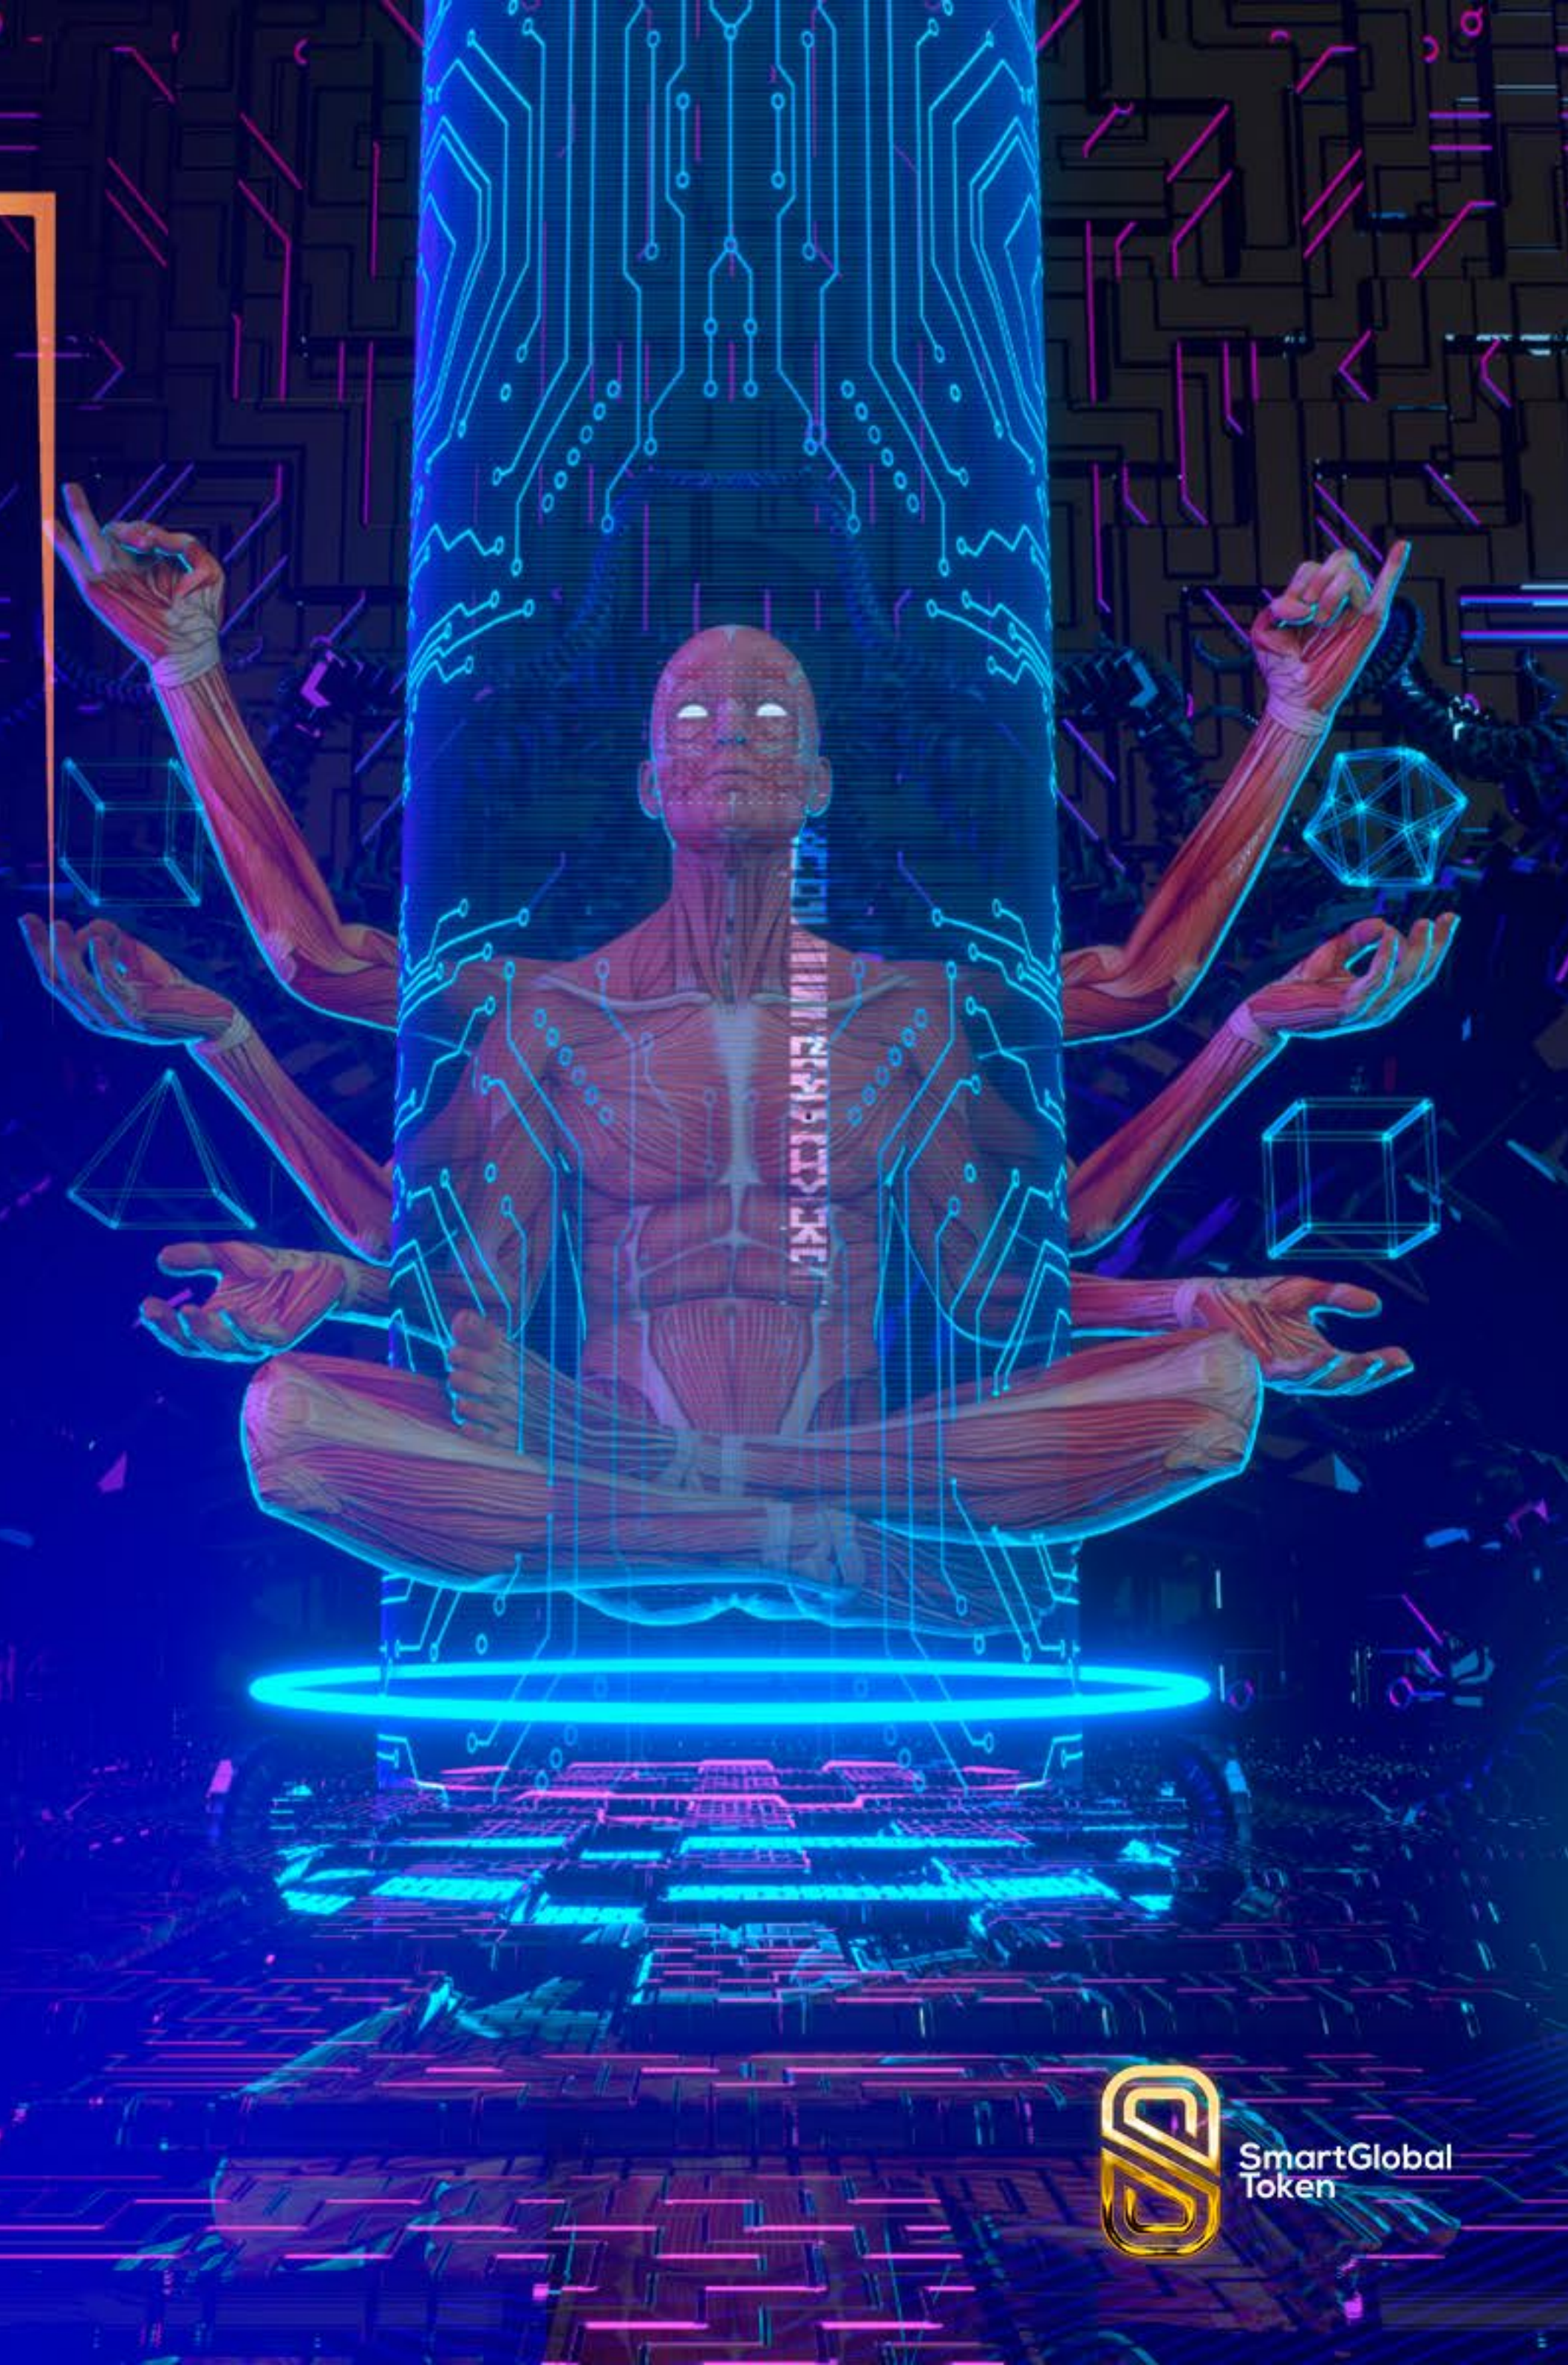

There are people who have paid Millions of Dollars for JPEG images or a Tweet but it is not the minimum price that you should invest if you also want to join the Non-Fungible Tokens that we will have for you. GlobalArt is an NFT store for creators and collectors, intuitive and easy where you can create, buy and sell art with our SGB Token, thus having profits from both the sales and the revaluation of your favorite NFT, you can generate passive income as a creator since each Every time you use your creations you will be generating NFT, generating a copyright gain.

NEXOCITY

The Nexocity is a metaverse of a persistent online virtual universe that combines multiple virtual spaces. You can think of this as a future version of the Internet.

Our metaverse will allow users to work, meet, play and socialize together in these spaces that will be divided by islands where each island will communicate with each other. These islands will include social environments such as an entertainment area (casinos, game rooms, bars, wine shops, party rooms, among others), business areas (shopping centers, business centers, vehicle sales and rentals), residential areas, among others areas.
